

# Data Infrastructures: GS Soil

Rainer Baritz

Federal Institute for Geosciences and Natural Resources (BGR)

Test case France-Germany:

Joëlle Sauter (ARAA)  
Annett Paetzold (BGR)

## GS Soil: “Assessment and strategic development of INSPIRE compliant Geodata-Services for European Soil Data”

<http://gssoil-portal.eu/>

- EU-Programme: eContentplus
- Funding: 4,1 Mio € (overall budget 5.1 Mio €)
- Duration: 06/2009 – 05/2012 (3 years)
- Coordinator: Coordination Center PortalU  
(German Environmental Portal)
- Consortium: 34 Partner
  - 18 EU member states
  - 24 soil data providers

- **Aim GS Soil:**

- **Establishment** of an European network **to improve the access to INSPIRE related spatial soil data,**

**INSPIRE:**

- **discovery services** (meta data)
- **view services** (web map services, WMS)
- **download services** (web feature services, WFS)
- **transformation services** (e.g. schema transformation:  
map non-interoperable data sets to interoperable ones;  
from local data bases into standardized exchange  
formats(XML); build WMS and WFS on such data sets)

# interoperability

Directly considered topics

Basic Soil Data

## **Soil** (INSPIRE Annex III)

- Soil Type: classification
- Soil Properties: depth, structure, particle size distribution, texture, organic carbon, bulk density, parent material, ...

various  
data sources

Linked topics

**Geology**  
(INSPIRE Annex II)

**Land Cover**  
(INSPIRE Annex II)

Soil Related Aspects

*Partly covered INSPIRE themes:*

## **Environmental Monitoring Facilities**

INSPIRE Annex III)

- Soil Monitoring Facilities & Long Term Observations

## **Natural Risk Zones** (INSPIRE Annex III)

- Priority Areas for Soil Threats: landslides, soil erosion, soil compaction, soil organic carbon decline, salinization, acidification, soil biodiversity loss, ...

## **Human Health and Safety** (INSPIRE Annex III)

- Soil Contamination: dangerous waste, heavy metals, ...

## **Protected Sites** (INSPIRE Annex I)

- Soil Protection Areas

**Habitats and Biotopes**  
(INSPIRE Annex III)

**Biogeographical Regions**  
(INSPIRE Annex III)

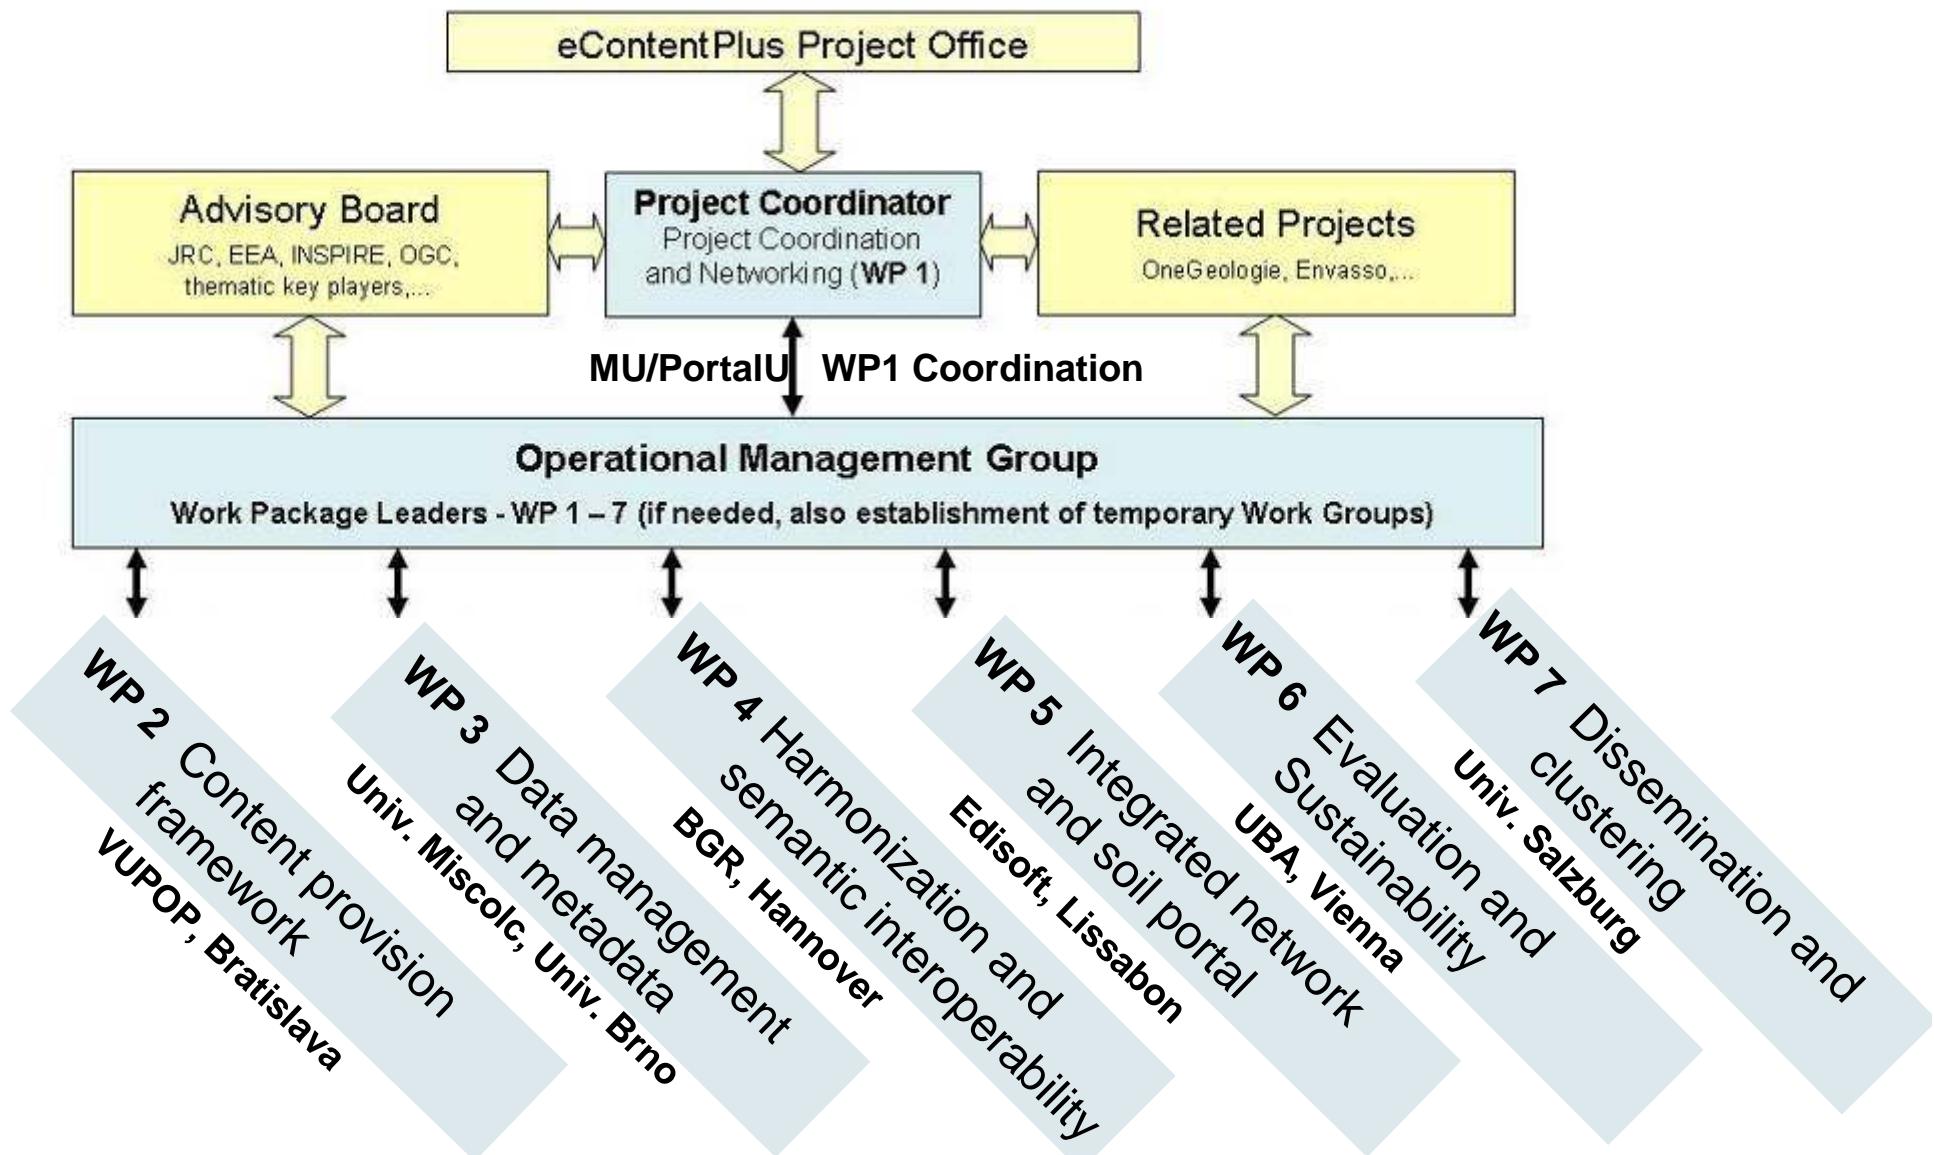

- The **INSPIRE directive** has been established in 2007
- **Metadata** have to be provided for INSPIRE Annex I and II themes until Dec. 3, 2010 (metadata services 2011),  
**Annex III: 03 Dec. 2013**
- **Spatial data services** for discovery and view services have to be set up in **2011 (May/Nov)**
- Provision of **INSPIRE-conform interoperable data sets** (existing data) by **May 15, 2019**
- **Thematic working groups** (TWGs) for data specifications development Annex II and II are now installed  
**Version 2.0** (for commenting and testing by registered participants (SDIC and LMO) **May – Oct. 2011**; **Version 3.0** currently being developed as basis for implementing rules (supplement INPSIRE regulation)

## Best Practice Network to ...

- support the development of a European geodata infrastructure for soil data by improving the accessibility of digital soil data for better (re)usage and exploitation
- lower the barriers to use data from different sources
- develop methods to produce interoperable spatial soil data, analyse requirements to harmonise soil information; consider the cross-border usability of data
- develop a “harmonized” metadata and content framework for soil information
- establish and operate a network of services for spatial datasets and metadata

# Project Structure

- A consolidated **soil-related theme catalogue and standards for describing the content of spatial soil data sets** (WP 2)
- A INSPIRE compatible **soil metadata profile** and **Best Practice Meta Data Development** (WP 3)
- Development and testing of data exchange formats and **Data Harmonization Best Practice Guidelines** (WP 4)
- A web portal (**GS Soil Portal**) which provides access to all project-relevant data (“open” network/“distributed” services):
  - Multilingual thesaurus for soil data
  - a view services for spatial data sets
  - data editor and catalogue service for INSPIRE conform metadata sets
  - WMS and prototype WFS for exemplary interoperable spatial soil datasets
  - case studies on cross-boarder delivery of harmonised soil data
- **Operational management plan** beyond the project lifetime

# WP 2

## Content provision framework

|                           |   |                |

report**

**Metadata report**

**Web Services  
report**

**Data information  
report**

**General  
information  
report  
(example)**

**Result:**

- 335 products
- 19 countries

## Content intellectual property rights assessment

- Recent evaluation of IPR for preliminary GS Soil catalogue

103 records have been evaluated:

Data access without restriction: 24 records

Data with restriction: 13 records

Access as raster: 10 records

Access with costs: 1 record

Access with the other restrictions: 2 records

Data with not definitely determined access: 12 records

Data with not defined access: 15 records

Data not available for GS Soil portal: 39 records

This result is preliminary. More data will enter into catalogue and some IPR statuses can be negotiated.

## Definition of content framework best practice guidelines

e.g. analyse and extend the existing reference material, analyse and process test cases - dependent on product type and scale

- Recommendations for legend definitions legend elements
- Recommendations for legend stratification
- Recommendations for mandatory attribute data (definitions) (for mapping units)
- Recommendations for soil profile properties (minimum set needed for important applications - PTF)
- Recommendations for parameter definitions (texture class acc. to FAO)

⇒ In a way this may repeat what is already there, but it is combined to a common terminology for soil data exchange in Europe

# WP 3

## Data management and metadata

- **Guidelines to correctly create and maintain metadata** in the XML format; examples of the XML encoding
- **Added soil theme-specific metadata elements**
- Well-described structure according to the ISO 19100 series standards; within ISO 19115 framework
- Registered as the INSPIRE Reference Material
- **Analysis of multilingual needs for meta-data content: development of a multi-lingual soil thesaurus**

## WP 3: Soil metadata profile

**GS SOIL PROFILE**

**INSPIRE**

**ISO CORE**

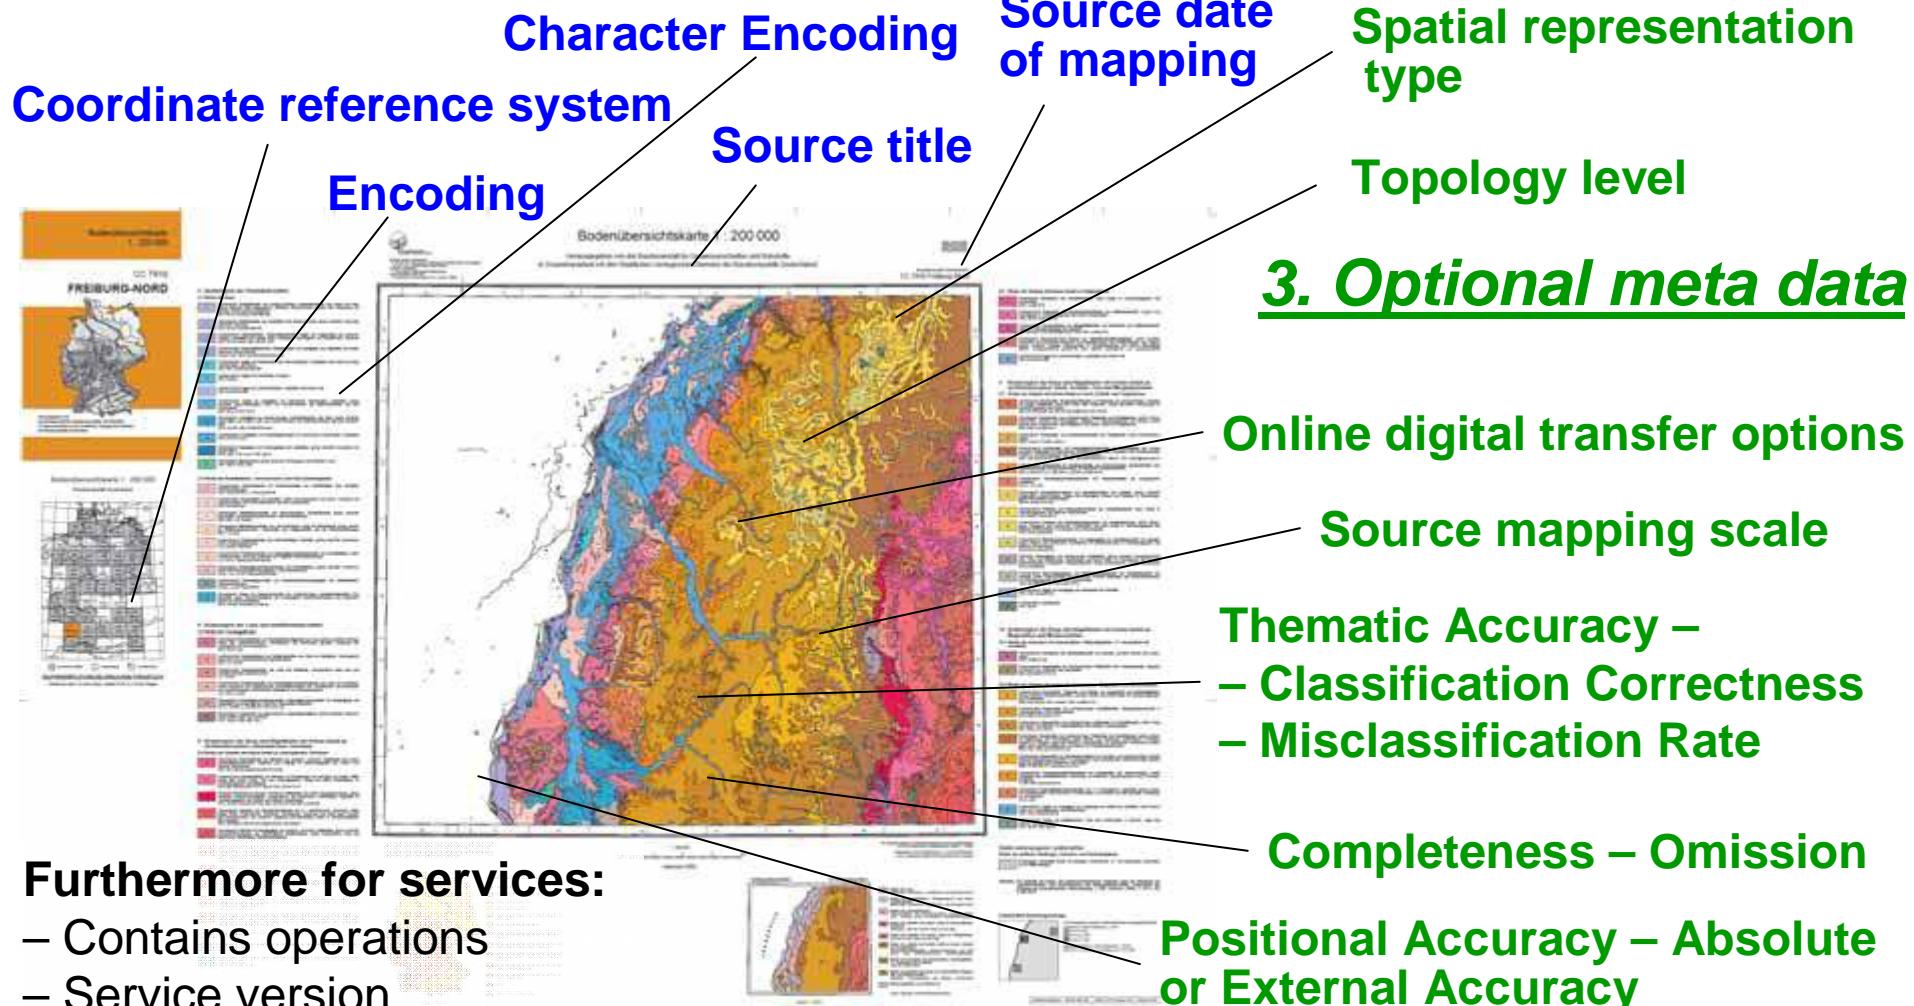

**Mandatory**

**ISO 19115**

**ISO 19119**

**ISO 19139**

## 2. Mandatory/conditional

GS Soil

# WP 4

## Harmonization and semantic interoperability

## Objectives

**Develop a methodical framework to share data using OGC and other (theme-specific) services**

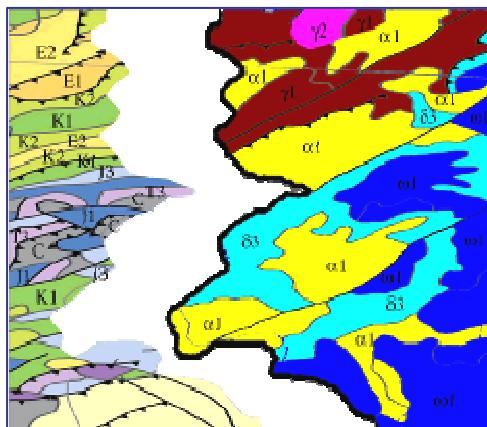

- **develop/test and/or modify data specifications**
- **define harmonization components for soil**
- **develop/test transformations**

⇒ **Data Harmonization Best Practise Guidelines**

- to allow the querying and exchange digital, interoperable soil information between data providers and users

- different formats
- different content

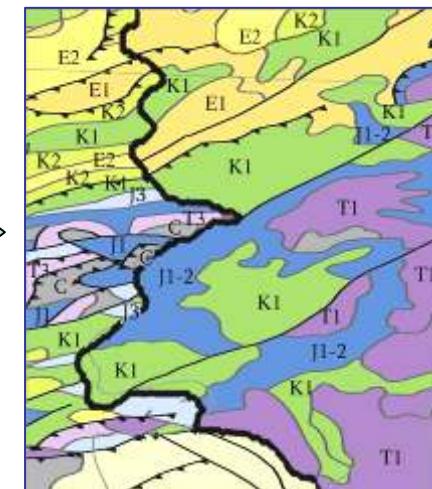

Figures:  
Asch and Troppenhausen (2004)

standardized domain-specific exchange formats: e.g.  
GeoSciML, SoilML

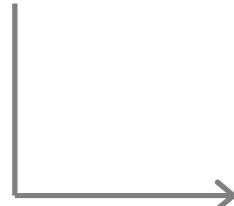

Agreements on content descriptions and semantic harmonization

- comparable content and format

- Review INSPIRE **methodology for data-specification-development**
- Review of **interoperability components**
- Review of **Soil Data Exchange Formats** (ISO SoilML, GeoSciML, SoterML)
- Analysis and description of the **semantic content and structure of testing data**
- Examples and rules for **improving the ISO draft exchange standard** for soil data, and example to implement it (applying data specifications and export data into standard XML structure (export file))

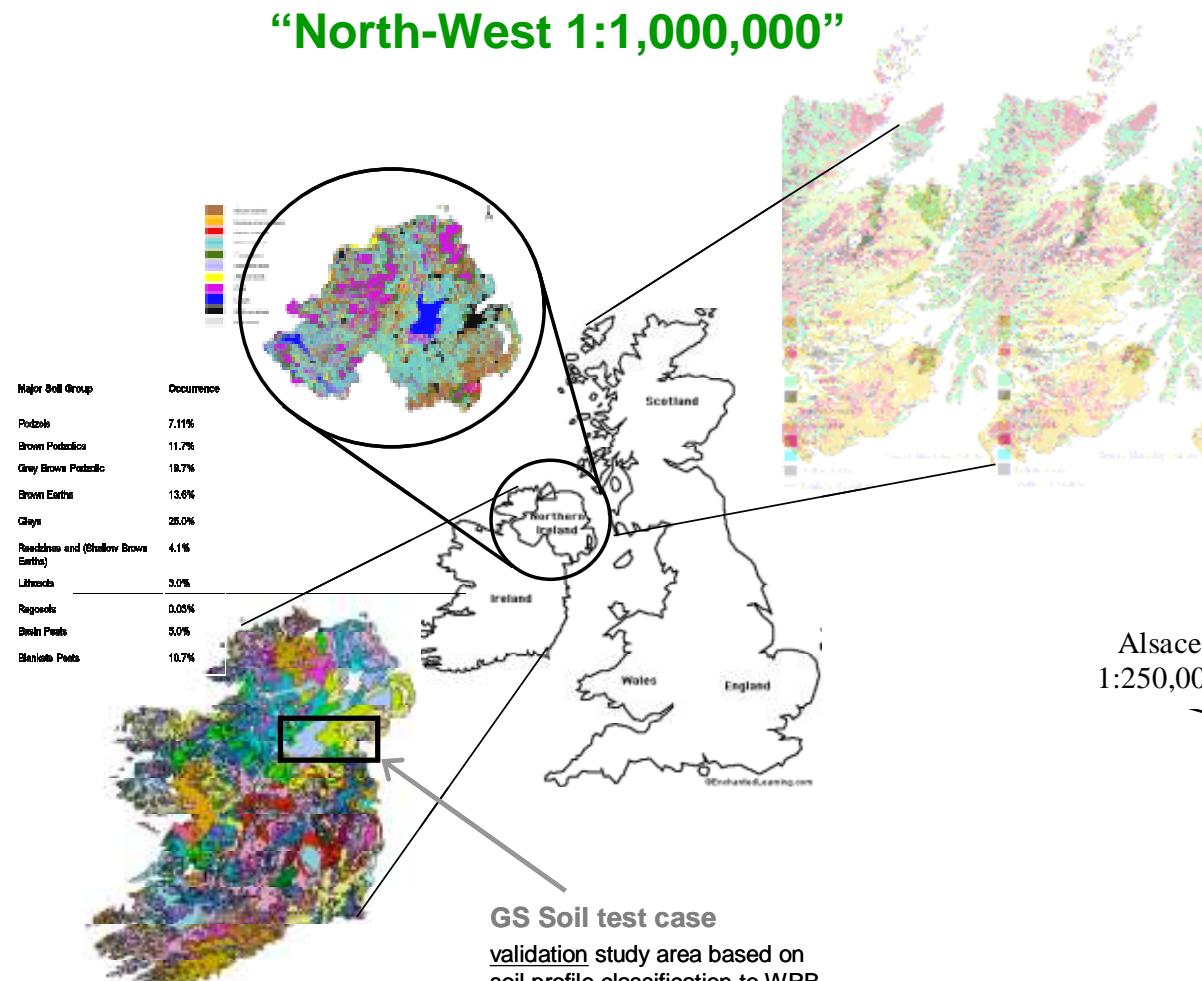

Managed by France!

| c3.2 | not persistent but weak visible effervescence                     | 2 - 4              |     |   |                             |                        |   |
| c3.3 | not persistent but clearly visible effervescence                  | 4 - 7              |     |   |                             |                        |   |
| c3.4 | not persistent but strong visible effervescence                   | 7 - 10             |     |   |                             |                        |   |
| c4   | Strong, persistent effervescence depending on added amount of HCL | 10 - 25            | ST  | Strong visible effervescence. Bubbles form a low foam | 10-25                       | 3                      | Strong reaction (thick layer of foam)                             |
| c5   | Strong, persistent effervescence depending on added amount of HCL | 25 - 50            | EX  | Extremely strong reaction. Thick foam forms quickly   | 25-50                       | 4                      | Extremely strong reaction   |
| c6   | Strong, persistent effervescence depending on added amount of HCL | > 50               |     |   | > 50                        | 4                      | Extremely strong reaction   |

## 2. FAO profile properties: D-F test case, CaCO<sub>3</sub>

**Carbonate Content**  
French carbonate Content [g/kg] and German Classes assigned to FAO

**Carbonate Content in Subsoil**  
Hatching: Calcereous Subsoil

Calcareous Subsoil

| Carbonate Content in Topsoil [%] |                                |
|----------------------------------|--------------------------------|
| N                                | 0 (non-calcareous)             |
| SL                               | 0 - 2 (slightly calcareous)    |
| MO                               | 2 - 10 (moderately calcareous) |
| ST                               | 10 - 25 (strongly calcareous)  |
| EX                               | >25 (extremely calcareous)     |

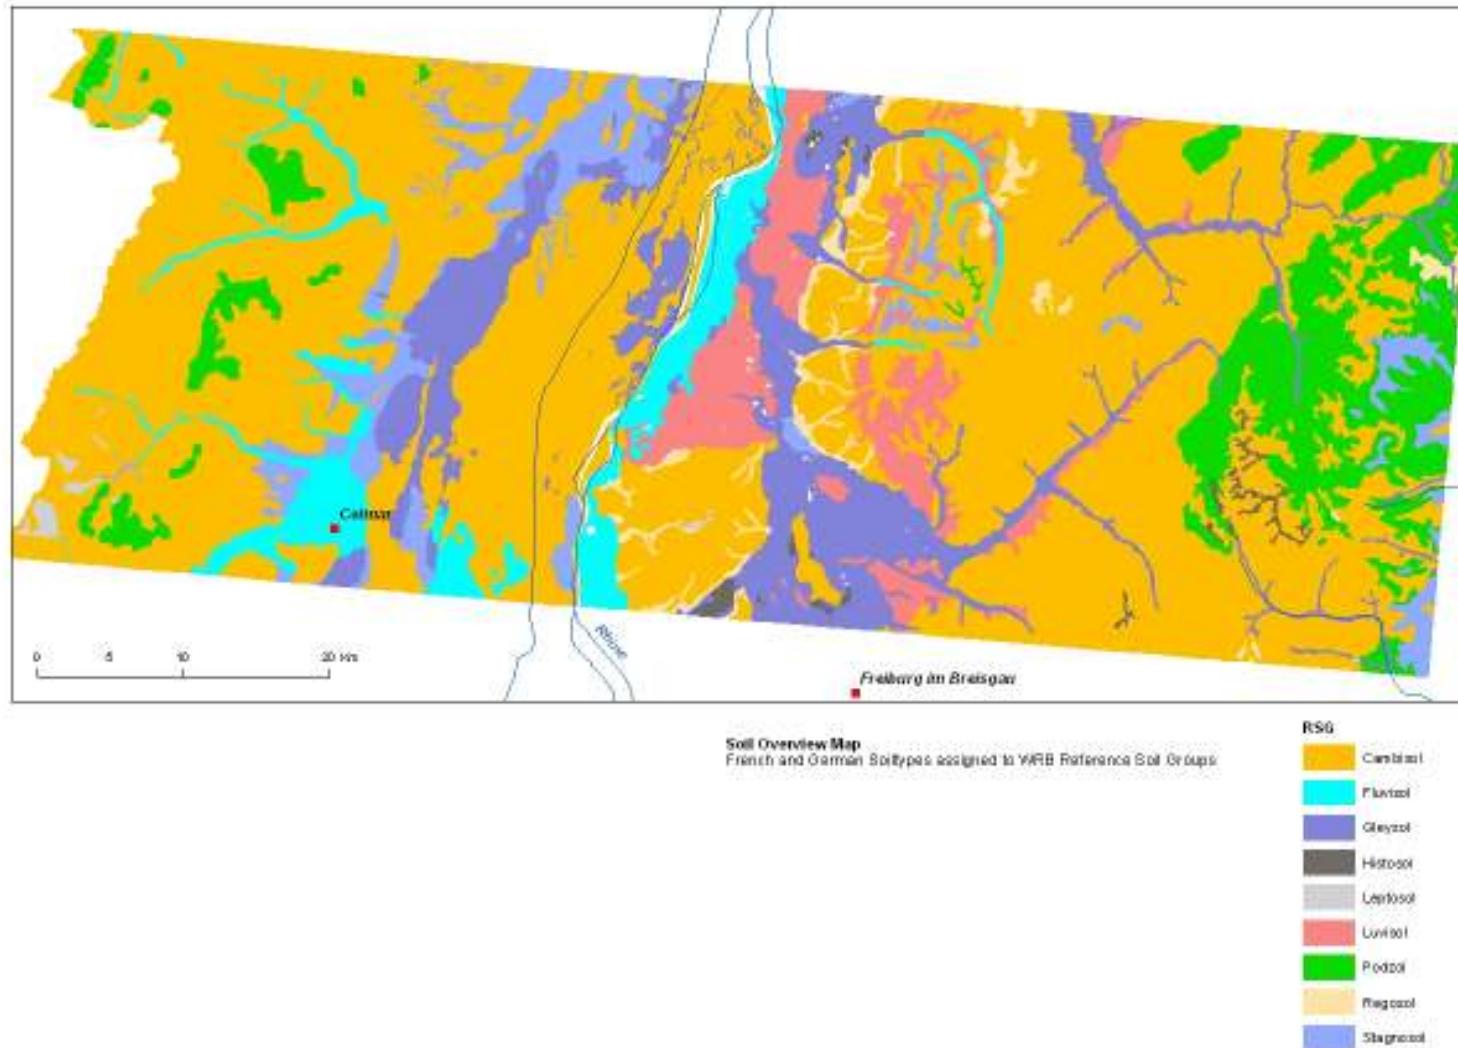

## 2. FAO profile properties: conclusions

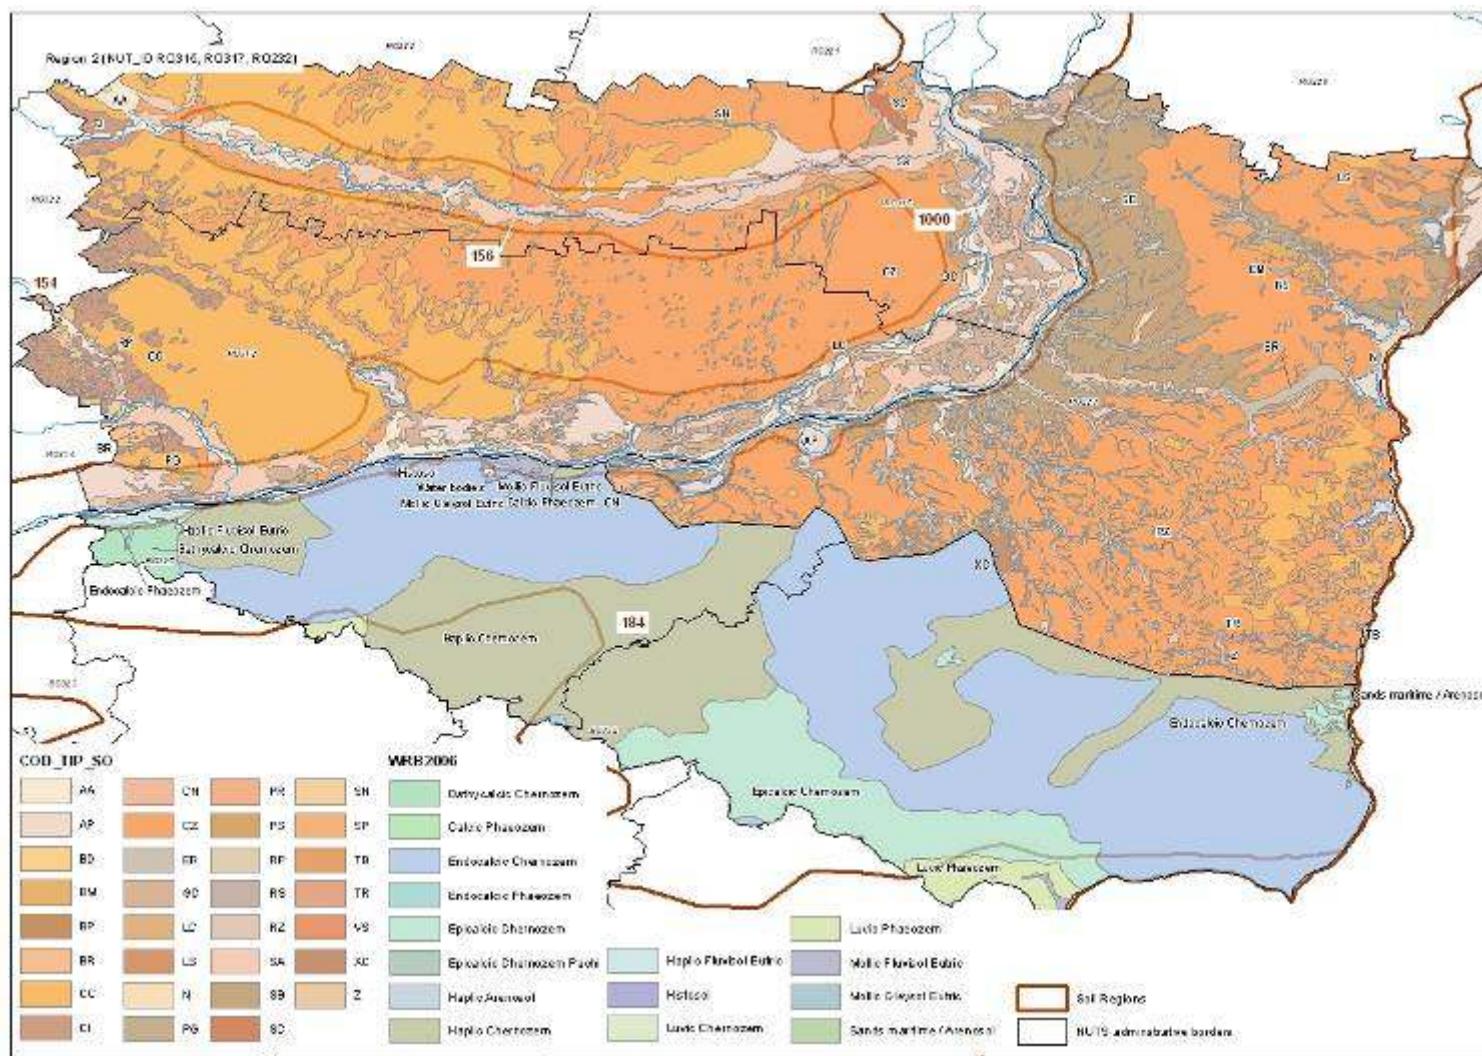

- Difficulties to select the typical properties per mapping unit; often, 2 profiles dominate a soil mapping unit
- Codes do not match between country and FAO (e.g. texture); causes error
- Needs to be done by the data provider

### 3. Soil classification: D-F test case, WRB-Reference soil Group

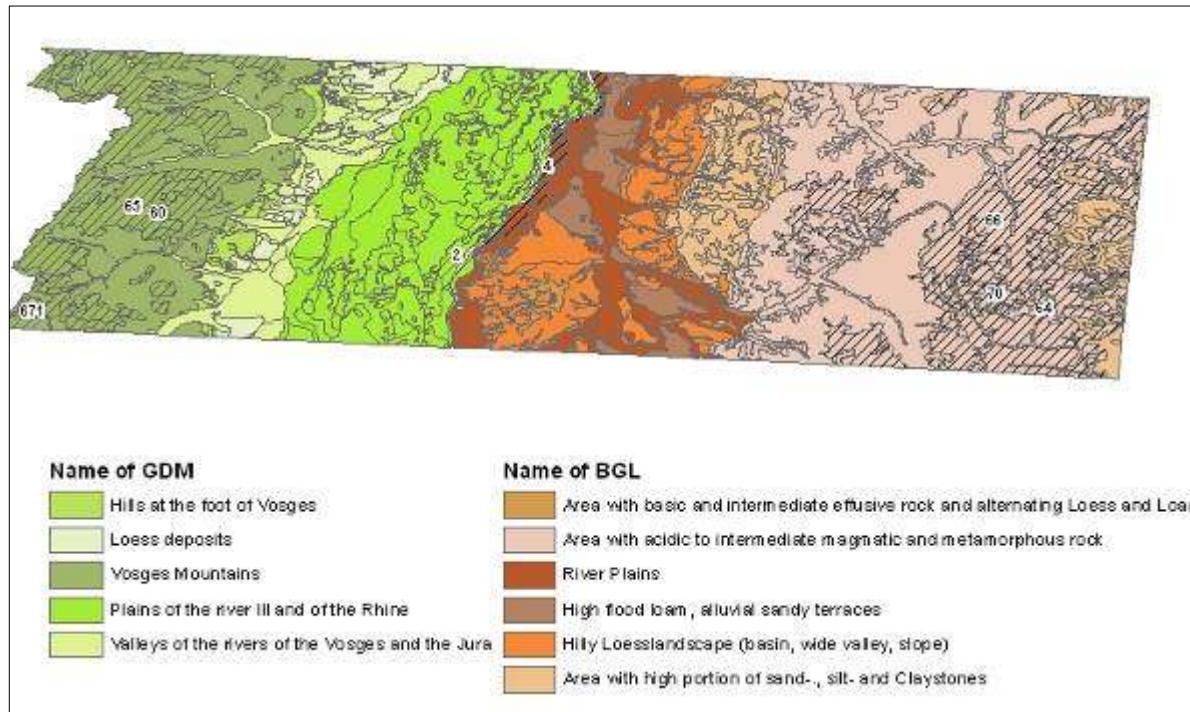

## 4. Soil (typological) maps: RO-BU country border

## 4. Soil (typological) maps: D-F test area: stratification

| France  | Germany   |
|---|---|
| <ol style="list-style-type: none"><li>1. Grandes Paysages (GP)</li><li>2. Grandes Domaines Morphologiques<br/>GDM N=5</li><li>3. Petits Domaines Morphologiques PDM</li></ol> | <ol style="list-style-type: none"><li>1. Bodenregionen (BR)</li><li>2. Bodengroßlandschaft (BGL) N=6<br/>(acc. to the German mapping guide, there is a third potential stratification level, similar to France, but it is not mapped:<br/>Bodenlandschaften (BL))</li></ol> |

## 4. Soil (typological) maps: D-F test area: resolution/structure

| French Units   | Germany Units   |
|--|---|
| <ul style="list-style-type: none"><li>• 1:250.000</li><li>• Area: approx 1451 km<sup>2</sup></li><li>• No of polygons: 377</li><li>• Minimum size: 0.012 km<sup>2</sup></li><li>• Maximum size: 190 km<sup>2</sup></li><li>• Mean size: 3.9 km<sup>2</sup></li><li>• 43 mapping units (UCS or U_CARTO)</li><li>• 1 to 12 derived soil profiles per unit (UTS or U_SOL)</li><li>• 227 derived soil profiles (UTS); 134 profiles are observed, analysed and registered in Database for this area</li><li>• Percentage value estimated by expert judgment</li><li>• “presence”*-percentage of each profile within unit given in percent</li></ul> | <ul style="list-style-type: none"><li>• 1:200.000</li><li>• Area: approx 1956 km<sup>2</sup></li><li>• No of polygons: 392</li><li>• Minimum size: 0.017 km<sup>2</sup></li><li>• Maximum size: 150 km<sup>2</sup></li><li>• Mean size: 5 km<sup>2</sup></li><li>• 42 mapping units (LE)</li><li>• 1 to 6 derived soil profiles per mapping unit</li><li>• 104 Profiles</li><li>• Percentage value estimated by expert; 3 meaning a percentage range from 30 to 70 percent (see Table 2 for full list of classes)</li><li>• “presence”-percentage of each profile within unit given as classified unit; each unit represents a percentage range</li></ul> |

# **WP 5**

## **Integrated network and soil portal**

- Concept of the Portal- and GS Soil network architecture

- Establishment of semantic services (Thesaurus, Gazetteer)
- Provision of open tools and INSPIRE services for data providers
- Continuous integration of services and information
- Deployment and operational manual including guidelines

Discovery (CSW)  
View (WMS)  
Download (WFS)  
GS Soil services  
...

The screenshot shows the GS Soil portal homepage. On the left, there's a search bar with placeholder text "Εισάγετε ένα ερώτημα" and a button "Αναζήτηση στο GS Soil". Below the search bar, there are links for "Προχωρημένο", "Καταχωρητής-Ερωτημάτων", "Προτυπόσας", and "Συμβουλές & Ευκαιρίες". The main content area has a yellow callout box containing the following text:

- Portal surface supports currently 11 Languages:
  - English,
  - German
  - Portuguese
  - Dutch (fm. Belgium)
  - Czech
  - Hungarian
  - Slovak
  - Bulgarian
  - Greek
  - Slovene
  - Romanian

To the right of the callout box, there's a language selection dropdown menu with the following options: Greek (selected), English, German, Portuguese, Dutch, Czech, Hungarian, Slovak, Bulgarian, Greek, Slovene, and Romanian. A red circle highlights the "Greek" option in the dropdown. Below the dropdown, there's a section titled "ΜΕΣΗ-ΠΛΗΡΟΦΟΡΗΣΗ: ΕΥΧΑΡΙΣΤΗΣΗ" with some descriptive text.

QUICK-INFO: GEOBIESAURUS

- Similar to the place-name registry of a map or to a digital gazetteer in the Internet, the "Geo-Thesaurus Unwelt (GTU)" lists the names of human settlements, rivers, inlets, landscapes and other geographic objects in Germany. The GTU contains the correct spelling of each object's name as well as the geographic position (in coordinates).

# WP 5: GS Soil portal open tools

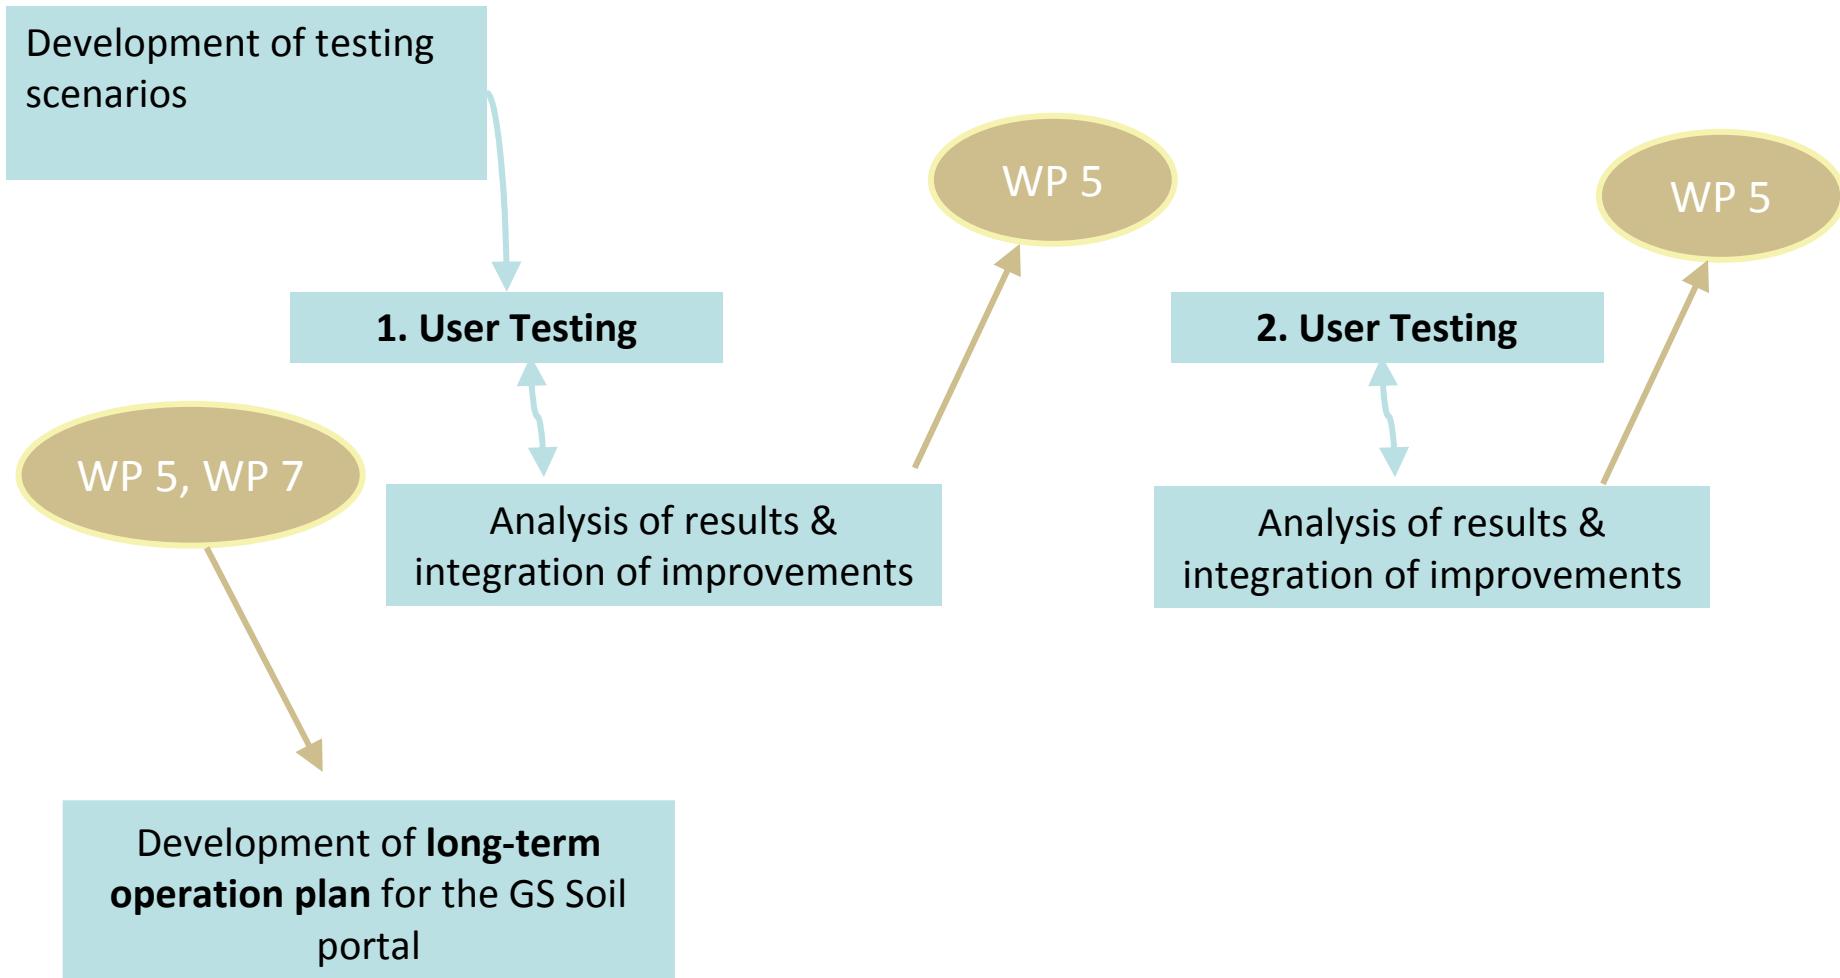

The screenshot displays four main components of the GS Soil portal:

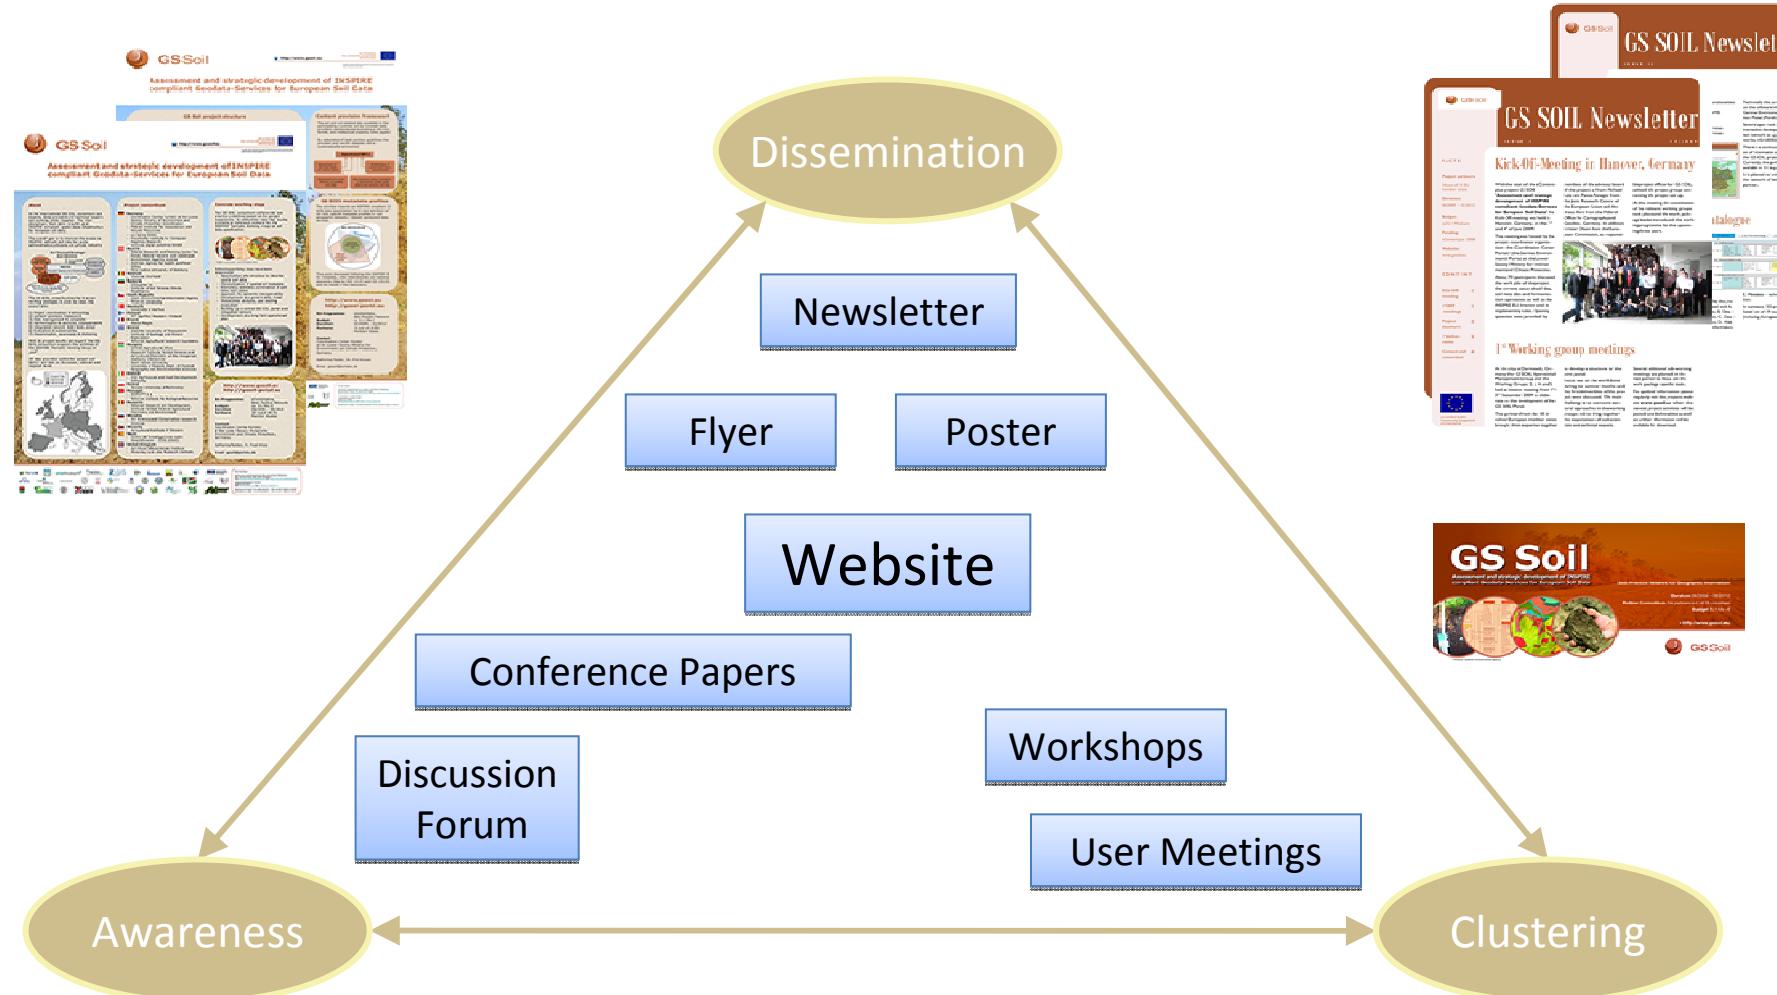

- GeoFOSS DP's Catalogue 'GeoNetwork'**: A search interface showing results matching search criteria (e.g., 1-30/32, page 1/1, 0 selected, sort by: Relevance). It includes a map viewer and identification info.
- GeoFOSS Map Server 'GeoServer'**: A management interface for a map server, showing layers like "Flanders\_soll" and "GS Soil - (PT) - Portuguese Soil Data - Web Map Service".
- GsSoil Catalogue 'InGrid©'**: A catalog interface listing various soil datasets and services.
- Portal Map Viewer WMS Services**: A map viewer showing soil distribution across Europe, with a legend for soil classes (e.g., Interior ou igual a 4.5, Entre 4.6 e 5.5, Entre 4.6 e 5.5 + (5.6 a 6.5), etc.) and active services like Topics, Partner, MetadataSearch, and WFS Search.
